

Assignment #1. HTML & CSS Basics 2. Team Members & Contribution

Students: Zhanaïym Sadyk, Anuar Tursynbekov

Group: SE – 2505

Project Topic: Formula 1 Themed Website

- Anuar - Developed the Home page (index.html), Teams page (teams.html), set up the global CSS styles, and configured GitHub repository.
- Zhanaïym - Developed the Drivers page (drivers.html), Contact page (contact.html), created forms, and participated in testing and documentation.

1. Technical Specifications & Implementation Details

The project was engineered strictly adhering to modern web development standards without the use of external frameworks or libraries:

- **Semantic HTML5 Structure:** All pages utilize clean, semantic layout tags (<nav>, <header>, <main>, <section>, <footer>) to ensure high accessibility and proper document outlining.
- **External CSS3 Styling:** The project utilizes a centralized stylesheet (css/style.css) implementing a dark, high-contrast motorsport aesthetic. Key design choices include custom color variables, flexbox alignment, and interactive hover states for navigation and buttons.
- **Mandatory Requirements Implementation:**
 - **Data Table:** Integrated on teams.html, structured with proper header (<thead>), rows (<tr>), header cells (<th>), and data cells (<td>) spanning 3 columns (Team, Power Unit, Points).
 - **Interactive Forms:** Implemented on contact.html, featuring text inputs, email validation, a dropdown selection for favorite teams, a color picker for livery customization (<input type="color">), and a text area for user messages.
 - **Image Integration:** Each of the four pages includes optimized imagery accompanied by descriptive alt attributes to comply with web accessibility guidelines.

2. Project Architecture & Page Overview

- **index.html (Home):** Serves as the landing page, introducing users to Formula 1 racing highlights, engineering teams, and high-speed statistics, accompanied by a hero image.
- **teams.html (Teams):** Displays the Constructors' Championship standings table alongside visual content detailing elite motorsport constructors.
- **drivers.html (Drivers):** Highlights top championship racers using ordered lists and includes a dedicated section introducing the student development team.
- **contact.html (Contact):** Features a comprehensive fan club registration form allowing users to submit preferences, interact with a color picker, and send feedback.
